

WHAT IS A CCRC?

A CCRC is a continuing care retirement community. We offer multiple care levels all on one campus.

We provide independent & assisted living, skilled nursing, rehab & dementia care.

These multiple care levels — often referred to as a “continuum of care” — are meant to provide either most or all of the care you’ll need throughout your lifetime.

We must be able to both meet the needs of the individual and have a bed available to admit to the Healthcare Center. We do fill from within the community before accepting outside inquiries.

HOPE | HOUSING | HEALTHCARE

OUR MISSION

A non-profit senior living community dedicated to providing quality housing, rehabilitative services & long-term nursing care, reflecting Christian compassion for all.

REFLECTION OF LIFE COMMUNITY

**Alzheimer's and
Dementia Care**

LIVE WITH DIGNITY

As life expectancy increases, so also does the probability that Alzheimer's disease or a related dementia will occur in older adults.

These diseases take a toll and place a heavy burden on the families who care for their loved ones.

Sayre Christian Village recognizes the need for a safe, peaceful, loving environment where residents with dementia may live with dignity.

In Sayre Christian Village's Reflection of Life Community, residents can maintain independence and freedom to enjoy their lives to the fullest extent.

UNIQUE PROGRAMS

Sayre Christian Village's Reflection of Life Community utilizes a unique concept of care for persons with dementia.

SAFETY & SECURITY

The community includes a total of 41 large private rooms and supports the Best Friends Approach™.

The Community is designed like a home, not an institution. The design includes a large community room and two open kitchens, surrounded by private bedrooms.

The large space has soaring ceilings, a sun room, several living room spaces, and a beautiful, secure courtyard, allowing them greater independence in a safe area.

Residents enjoy spending the day with their 'Best Friends' in the peace and harmony that results from this approach.
